#### **ASSIGNMENT-2**

Assignment Date	26 September 2022
Student Name	Gautham G D
Student Roll Number	130719104026
Maximum Marks	2 Marks

1. Write a flask program which should display name, email, phone and hit show them when we hit submit

### app.py:

### index1.html:

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>Python program</title>
</head>
<body>

<form action="/login" method="POST">

Enter name:
<input type="text" name="nm"/>
<input type="email" name="em" />
<input type="email" name="em" />
Enter phone number:
<input type="text" name="ph"/>
<input type="text" name="ph"/>
<input type="submit" value="submit"/>
</form>
<{form>
```

```
{{x}}
{{z}}
</body>
</html
```

Enter name:
Enter email:
Enter phone number:
submit

2. Write a flask program which should cover cookies and sessions

### cookies.py:

```
from flask import *
    app =
Flask(_name_)
@app.route('/cookie')    def
cookie():
    res = make_response("<h1>cookie is set</h1>")
res.set_cookie('testing')         return res
    if __name__ ==
'__main__':
app.run(debug = True)
```

### session.py:

```
from flask import * app
= Flask(_name_)
app.secret_key = "abc"
@app.route('/') def
home():
   res = make_response("<h4>session variable is set, <a</pre>
href='/get'>Get Variable</a></h4>")
                                 return res;
session['response']='session#1'
@app.route('/get') def
getVariable():
'response' in session:
s = session['response'];
        return render_template('getsession.html', name = s)
  if __name___==
app.run(debug = True)
```

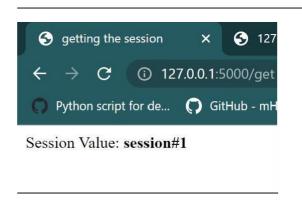

### getsession.html:

```
<html>
<head>
<title>getting the session</title>
</head>
<body>
Session Value: <b>{{name}}
</body>
</html>
```

### Output:

# cookie is set

3. Write a flask program which should display resume and also should have upload resume option.

resume.py:

```
from flask import Flask,render template,request
from werkzeug.utils import secure filename app
= Flask( name ) @app.route('/') def home():
    return render_template("resume.html")
@app.route('/login',methods=["POST"]) def
login():
            if request.method == 'POST':
user = request.form['nm']
                                 agee =
request.form['age1']
                           qualification =
request.form['quali']
                             clgname =
request.form['clg']
                           paddress =
request.form['adres']
                            techskill =
request.form['skill']
                             soskill =
                             mail =
request.form['sskill']
request.form['mail']
        return render template("resume.html",a =
user,b=agee,c=qualification,d=clgname,e=paddress,f=techskill,g=soskill,h=mail)
@app.route('/upload',methods=['GET','POST'])
def flask_upload():
                       if request.method
=='POST':
                 f=request.files['file']
       f.save(secure filename(f.filename))
return 'Upload successsful' if
(__name__)=='__main__': app.run(debug =
True)
```

### resume.html:

```
<!DOCTYPE html>
<html lang="en">
<title>Resume</title>
</head>
<body>
   <h1>Resume</h1>
   <form action="/login" method="POST">
       <b>Name:</b><input type="text" name="nm"/> 
       <b>Age:</b><input type="number" name="age1" /> 
      <b>Highest Qualification:</b><input type="text" name="quali"/> 
      <b>College Name:</b><input type="text" name="clg" />
      <b>Permanent Address:</b><textarea type="text" name="adres">
</textarea>
       <b>Technical Skills:</b><textarea type="text" name="skill"
></textarea>
       <b>Soft Skills:</b><textarea type="text" name="sskill"
></textarea>
```

### Output:

# Resume

Name:
Age:
Highest Qualification:
College Name:
Permanent Address:
Technical Skills:
Soft Skills:
Email:
submit
